A good education is an essential factor for a child to meet the complicated challenges of the present-day world. Therefore, parents try hard to give their children the best education possible. The capacity of a child to acquire a better education depends on many factors. Among which, the fundamental language skills such as reading & writing, basic mathematical concepts, forming long term memories, and computer literacy are very important.

We believe that the primary educational environment should not be confined to the preschool/primary grade class room. The education that the child receives during 2-5 hours with the guidance of his/her teacher & the company of his fellow students should not be restricted to the class room.

Computer⬜ - The newest education colleague of your child

The children we meet nowadays, including your own child are the pioneers of a complicated & competitive future society. They are not prepared to limit their education to the books within the class room. Out of hundreds of educational instruments which children use to acquire knowledge, the computer could play the biggest role.

Our endeavor is to present you a computer based education system in Sinhala and English to meet the aspirations of children in their preliminary education. Although numerous computer based education system that are available on the market, an overwhelming majority are available only in global languages such as English or Tamil. Due to this reason, native Sri Lankan children who love computer based educational programmers for their primary education, hardly find any program in their native language.

What is eNipuna?

eNipuna is an educational software kit which consists of both Sinhala and English languages. We are glad to inform you that, it is being used by over 100,000 Sri Lankan students in their schools to expand their subject knowledge. eNipuna has been developed for preschool to primary level children, in order for them to easily understand class room lessons using a computer.
